

Restaurant Partner Onboarding – Test Script

Objective

Verify that the Restaurant Partner Portal correctly handles the complete onboarding lifecycle, including referral acceptance, registration validation, document verification, and final partner approval.

Test Environment

- Application: Restaurant Partner Portal
 - Platform: Console Application (.NET)
 - Tester: QA Engineer
 - Build Version: Latest
-

Test Case 1: Successful Partner Onboarding

Scenario

Restaurant completes all onboarding steps successfully.

Test Data

Field	Value
Restaurant Name	Spice Garden
Referral Code	REF123
Owner Name	John Smith
Business Address	123 Main Street
Tax ID	TAX001
Contact Phone	9876543210
Documents	BusinessLicense, HealthPermit, FoodSafetyCertificate

Steps

1. Launch application.
2. Enter restaurant name.
3. Enter referral code.
4. Accept referral (Y).
5. Submit valid registration details.
6. Admin approves registration.
7. Upload all required documents.
8. Admin verifies documents.

9. Admin accepts restaurant as partner.

Expected Result

- Registration approved.
 - Documents verified successfully.
 - Restaurant accepted as partner.
 - Final Status = **PartnerAccepted**
-

Test Case 2: Referral Rejected

Scenario

Restaurant rejects referral invitation.

Steps

1. Launch application.
2. Enter restaurant details.
3. Select "N" for referral acceptance.

Expected Result

- Process terminates immediately.
 - Final Status = **Rejected**
-

Test Case 3: Empty Registration Fields

Scenario

User attempts to submit blank registration details.

Steps

1. Launch application.
2. Accept referral.
3. Leave Owner Name blank.

Expected Result

- System displays:

This field cannot be empty.

- User is prompted again.
-

Test Case 4: Admin Rejects Registration

Scenario

Admin manually rejects registration.

Steps

1. Complete referral acceptance.
2. Submit valid registration details.
3. Select "N" when asked:

Admin: accept the registration form?

Expected Result

- Registration rejected.
 - Final Status = **Rejected**
-

Test Case 5: Invalid Registration Form

Scenario

Registration contains missing required data.

Steps

1. Create registration object with missing fields.
2. Call:

`Admin.AcceptRegistration()`

Expected Result

- Method returns False.
 - Status becomes **Rejected**.
-

Test Case 6: Missing Business License

Scenario

Required document not uploaded.

Documents Uploaded

- HealthPermit
- FoodSafetyCertificate

Steps

1. Complete registration approval.
2. Upload only above documents.
3. Start document verification.

Expected Result

- Verification fails.
 - Status becomes **Rejected**.
-

Test Case 7: Missing Health Permit

Documents Uploaded

- BusinessLicense
- FoodSafetyCertificate

Expected Result

- Verification fails.
 - Status becomes **Rejected**.
-

Test Case 8: Missing Food Safety Certificate

Documents Uploaded

- BusinessLicense
- HealthPermit

Expected Result

- Verification fails.
 - Status becomes **Rejected**.
-

Test Case 9: No Documents Uploaded

Steps

1. Complete registration approval.
2. Press Enter without uploading documents.

3. Trigger verification.

Expected Result

- Verification fails.
 - Status becomes **Rejected**.
-

Test Case 10: Case-Insensitive Document Validation

Documents Uploaded

- businesslicense
- healthpermit
- foodsafetycertificate

Expected Result

- Verification succeeds.
 - Status becomes **DocumentsVerified**.
-

Test Case 11: Admin Rejects After Verification

Scenario

All checks pass but admin declines partnership.

Steps

1. Complete registration approval.
2. Upload valid documents.
3. Verify documents successfully.
4. Select "N" for:

Admin: accept this restaurant as a partner?

Expected Result

- Status becomes **Rejected**.
-

Test Case 12: Duplicate Document Uploads

Documents Uploaded

- BusinessLicense
- BusinessLicense
- HealthPermit
- FoodSafetyCertificate

Expected Result

- Verification succeeds.
 - Status becomes **DocumentsVerified**.
-

Test Case 13: Verify Documents Before Registration Approval

Steps

1. Create restaurant.
2. Upload documents.
3. Call:

```
Admin.VerifyDocuments()
```

before registration approval.

Expected Result

- Method returns False.
 - Status remains unchanged.
-

Test Case 14: Null Registration Form

Steps

1. Create restaurant.
2. Do not create registration form.
3. Call:

```
Admin.AcceptRegistration()
```

Expected Result

- Method returns False.
 - Status remains unchanged.
-

Test Case 15: End-to-End Status Transition Validation

Expected Flow

```
Referred
  ↓
ReferralAccepted
  ↓
RegistrationSubmitted
  ↓
RegistrationApproved
  ↓
DocumentsUploaded
  ↓
DocumentsVerified
  ↓
PartnerAccepted
```

Validation

Verify each status transition occurs in correct sequence.

Exit Criteria

All test cases pass successfully.

Success Conditions

- Registration validation works.
- Document validation works.
- Status transitions are correct.
- Rejection scenarios terminate onboarding.
- Final partner acceptance works correctly.
